# SINAMICS V20

## The perfect solution for basic applications

### SINAMICS V20, the versatile converter for basic demands

Today, in an increasing number of applications in plant and machinery construction, individual automation and drive solutions are demanded that automate simple motion sequences with low associated requirements.

With its compact SINAMICS V20, the basic performance converter, Siemens offers a simple and cost-effective drive solution for these types of applications. SINAMICS V20 sets itself apart with its quick commissioning times, ease of operation, robustness and cost efficiency.

With seven frame sizes, it covers a power range extending from 0.12 kW up to 30 kW (1/6 hp up to 40 hp).

### Minimize your costs

Engineering, commissioning and operating costs must be kept as low as possible. You have precisely the right solution with our SINAMICS V20. To increase energy efficiency, the converter is equipped with control technology designed to achieve optimum energy efficiency through automatic flux reduction. Not only this, it displays the actual energy consumption and has additional, integrated energy-saving functions. This allows energy consumption to be slashed drastically.

### Highlights

#### Easy to install

- Push-through and wall mounting – side-by-side possible for both
- USS and MODBUS RTU at terminals
- Integrated braking chopper for 7.5 kW to 30 kW (10 hp up to 40 hp)
- Electromagnetic compatibility (EMC) category C1/C2

#### Easy to use

- Parameter loading without power supply
- Easy commissioning with mobile device or laptop with web server module SINAMICS V20 Smart Access
- Integrated application and connection macros
- Keep Running mode for uninterrupted operation
- Wide voltage range, advanced cooling design and coated PCBs increase robustness

#### Easy to save money

- ECO mode for V/f, V<sup>2</sup>/f / Hibernation
- Monitoring energy and water flows
- High overload and low overload mode for FSE

**Power range** 0.12 kW to 30 kW  
(1/6 hp to 40 hp)

**Voltage range** 1AC 200 V ... 240 V (–10% / +10%)<sup>1)</sup>, <sup>2)</sup>  
3AC 380 V ... 480 V (–15% / +10%)

**Control modes** V/f V<sup>2</sup>/f FCC V/f multi-point

<sup>1)</sup> Single-phase devices can also be connected to two phases of a 3-phase 120/240 V supply system. The voltage between L1 and L2 should be in the range of 200 V to 240 V, –10% to +10% (whether phase to phase or phase to neutral).

<sup>2)</sup> Voltage tolerance for FSAA/FSAB (–15% / +10%)

# Typical applications

## Pumping, ventilating and compressing

- Centrifugal pumps
- Radial/axial fans
- Compressors
- ...

### Additional advantages:

- High availability through automatic restart and flying restart after power failures
- Broken belt detection by monitoring the load torque
- Pump protection against cavitation
- Hammer start and blockage clearing modes for clogged pumps
- PID controller for process values (e.g. temperature, pressure, level, flow)
- PID auto tuning to optimize controller parameters
- Hibernation mode stops the motor when demand is low
- Motor staging extends the flow range by adding two more fixed-speed drives (cascade)
- Frost and condensation protection prevents moisture in motors under extreme environmental conditions

## Moving

- Belt conveyors
- Roller conveyors
- Chain conveyors
- Bucket conveyors
- Treadmills
- ...

### Additional advantages:

- Soft, jerk-free acceleration reduces the stress on the gear units, bearings, drums and rollers
- Super torque start for conveyor belts with high breakaway torque
- Dynamic behavior by using braking resistor or DC braking
- Direct control of mechanical holding brake
- Broken belt detection by monitoring the load torque
- Precise stopping with Quick Stop (switch-off positioning) independently from the control cycle

## Processing

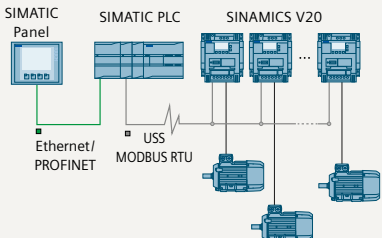

- **Single drives in the process industry** such as mills, mixers, kneaders, crushers, mechanical presses, agitators, centrifuges
- **Single drives in commercial appliances** such as kitchen ovens, mixers, washing machines
- **Main drives in machines with mechanically coupled axes** such as ring spinning machines, braiding machines for textiles, ropes and cables

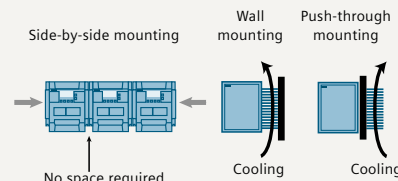

### Additional advantages:

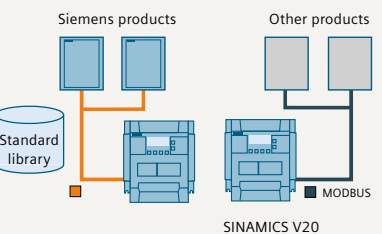

- Frost and condensation protection prevents moisture in motors under extreme environmental conditions
- Higher productivity without interruptions due to Keep Running mode
- Exchange of regenerative energy via the DC link
- Super torque start for machines with a high breakaway torque

## DT Configurator – fast product selection and ordering

### The DT Configurator supports you with:

- Selecting the best drive based on the application
- The subsequent ordering process

### The DT Configurator supplies you with:

- A drive that is optimally tailored to your requirements
- 2D dimensional drawing
- 3D models
- Data sheets
- EPLAN macros

You can directly order the selected components through the Industry Mall – the Siemens e-commerce website – and without having to duplicate entries. In order to avoid making mistakes while ordering, the order number is checked to ensure that it is correct.

## Industry Mall – comprehensive online information and services

### The Industry Mall supports you with:

- Selecting products, services and trainings

### The Industry Mall supplies you with:

- A complete and up-to-date Siemens automation and drive technology product spectrum
- System configuration
- Download of CAX data, data sheets and schematic diagrams
- Online shopping cart orders
- Price and order overview
- Availability check and order tracking

# Complete motion control solutions from Siemens

SINAMICS V20 and SIMATIC – Siemens offers comprehensive solutions from a single source for general motion control applications. Through the optimized interaction between SIMATIC control and SINAMICS drive technology, as shown in our “SINAMICS Application Examples,” we can provide you with highly efficient systems.

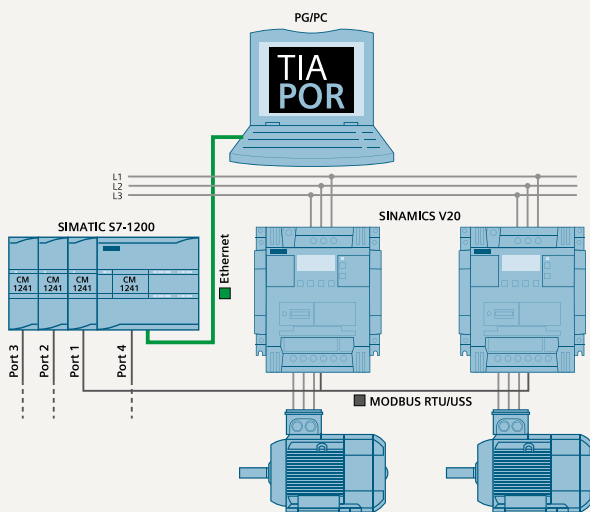

## Siemens application examples comprise:

- Ready-to-run application examples, including wiring diagrams, parameter descriptions
- Sample configurations for connecting SINAMICS with SIMATIC, including hardware, software and wiring examples, installation instructions for the supplied S7 project, drive parameterization, and HMI sample projects

## Customer benefits:

- Provides a basis for customer-specific configurations
- Optimal leveraging of TIA advantages
- Free download via the Online Support Portal:  
<https://siemens.com/sinamics-applications>

## Example: Speed control of a V20 with S7-1200 (TIA Portal) via USS® protocol/MODBUS RTU with HMI

### Task

#### USS communication

- Cyclic write/read access of a SIMATIC S7-1200 to selected SINAMICS V20 process/control data, the transmission of which is supported by a STEP 7 instruction
- Connections of up to 64 drives are possible

#### MODBUS communication

- Cyclic write/read access of a SIMATIC S7-1200 to selected SINAMICS V20 process/control data that can be triggered via a STEP 7 instruction via MODBUS register numbers

### Solution

With up to three communication modules CM1241 added to the SIMATIC S7-1200 and one communication board CB1241, a USS® or MODBUS communication can be established to SINAMICS V20 drives.

#### USS communication

- Up to 16 drives can be operated per port. The user function blocks use STEP 7 instructions USS\_PORT, USS\_DRV, USS\_RPM and USS\_WPM

#### MODBUS communication

- Up to 32 drives can be operated per port (with repeaters, up to 247). The user function blocks use the STEP 7 instructions MB\_COMM\_LOAD and MB\_MASTER

# Overload capability characteristics

**Low overload (LO)** is generally used for applications demanding a low level of dynamic performance (continuous duty), square-law torque characteristic with low breakaway torque and low speed precision.

For example: centrifugal pumps, radial/axial fans, reciprocating blowers, radial compressors, vacuum pumps, agitators, ...

## Overload capability

Low overload (LO) 110%  $I_L^{(1)}$  for 60 s within a cycle time of 300 s

**High overload (HO)** is generally used for applications demanding a higher dynamic performance (cyclic duty) as well as constant torque characteristics with a high breakaway torque.

For example: conveyor belts, geared pumps, eccentric worm pumps, mills, mixers, crushers, vertical conveying equipment, centrifuges, ...

## Overload capability

High overload (HO) 150%  $I_H^{(2)}$  for 60 s within a cycle time of 300 s

<sup>1)</sup> The output current  $I_L$  is based on the duty cycle for low overload (LO).

<sup>2)</sup> The output current  $I_H$  is based on the duty cycle for high overload (HO).

Easy accessibility from outside the cabinet.

Subject to changes and errors.

The information given in this document only contains general descriptions and/or performance features which may not always specifically reflect those described, or which may undergo modification in the course of further development of the products. The requested performance features are binding only when they are expressly agreed upon in the concluded contract.

For the secure operation of Siemens products and solutions, it is necessary to take suitable preventive action (e.g. cell protection concept) and integrate each component into a holistic, state-of-the-art industrial security concept. Third-party products that may be in use should also be considered.
